PROJECT INSTRUCTIONS

You are to create a project that will allow users to select a subject and the number of question they want to answer.

The API currently has questions for Math and English.

How to consume the API?

API: https://kit-questions.glitch.me
Endpoint: /question
Method: GET
Parameters: Subject and Number

Example: Get three questions in Math
Request:
https://kit-questions.glitch.me/question/math/3

Response:
```
{
      "status": 0,
      "subject": "math",
      "number_of_questions": "3",
      "questions":{
            "Q1":{
                  "question": "What is the answer for 2 + 2?",
                  "answer_options":{
                        "a": "3",
                        "b": "7",
                        "c": "2",
                        "d": "4"
                  },
                  "correct_answer": "d"
            }
      }
}
```

Demo Project:

Follow this link to see how your project should be done.
